UNDERSTANDING SPECIALTY DRUGS

Specialty drugs are often prescribed to treat complex and/or chronic conditions, such as multiple sclerosis, hepatitis C, and rheumatoid arthritis.

Specialty drugs often call for carefully following a treatment plan (or taking them on a strict schedule). These medications have special handling or storage needs and may only be stocked by select pharmacies.

Some specialty drugs must be given by a health care professional, while others are approved by the FDA for self-administration (given by yourself or a care giver). Medications that call for administration by a professional are often covered under your medical benefit plan. Your doctor will order these medications. Coverage for self-administered specialty drugs is usually provided through your pharmacy benefit plan. Your doctor should write or call in a prescription for self-administered specialty drugs to be filled by a specialty pharmacy.

Your plan may require you to get your self-administered specialty drugs through Accredo or another in-network pharmacy. If you do not use these pharmacies, you may pay higher out-of-pocket costs. Your doctor may also order select specialty drugs that must be given to you by a health professional through Accredo.
